

#### **UNIVERSAL MESSAGING**

# COMPARISON WITH WEBMETHODS BROKER

2020

**Universal Messaging Product Team** 

The purpose of the information in this deck is to indicate comparable high level features between Universal Messaging and webMethods Broker. The products provide similar but not identical features and the information is intended to form part of the overall decision process on when to move from webMethods Broker to Universal Messaging.

You should also refer to the following document which provides information on areas that are as yet partially comparable and may affect your decision to migrate.

suspend Retrieval		<b>~</b>	*The behavior is different between Broker and UM. With Broker, a suspended trigger will temporarily stop messages from being received. It will not affect the messages already received. With UM, a suspended trigger will also prevent messages from being received. However, messages already received but not acknowledged will be redelivered as duplicates. This behavior should change in 10.7 when UM releases the consumer pause API.
